AERON CAPONPON

PH - GMT+8 | aeroncaponpon.01@gmail.com | linkedin.com/in/aeron-caponpon | github.com/aeron-cap | aeron.is-a.dev

SKILLS

Languages & Frameworks: Go, TypeScript, JavaScript, Python, PHP, SQL | NestJS (Node.js), React, Laravel, Angular
Infrastructure & Tools: Docker, Linux, Git, CI/CD, Nginx, Prometheus, Grafana
Databases & Practices: PostgreSQL, MySQL, SQLite, query optimization, unit and e2e testing with Playwright

WORK EXPERIENCE

ACCUR8 ENTERPRISE SOLUTIONS INC. Manila (Remote)
Junior Full Stack Developer Sept 2024 – Present

- Optimized backend database operations by refactoring join-heavy queries and eliminating n+1 bottlenecks, achieving up to 95% performance improvements and reducing dashboard and report load times on datasets exceeding 300,000 rows.
- Designed an asynchronous Excel export pipeline using Laravel queues and a compiled Go export worker, preventing request failures and reducing generation time for exports containing up to 8 million cells from over two minutes to under 10 seconds.
- Maintained ownership of full-stack SaaS features across accounting and inventory management domains using Laravel and Angular, adapting the system to support diverse and evolving business processes of 8+ enterprise clients.
- Serve as lead developer for one enterprise client, delivering feature requests, coordinating deployments and uptime, and reviewing pull requests.
- Building a Playwright e2e suite for the web app; writes unit tests for backend changes.
- Built Python scripts and internal tools to streamline data processing workflows and automate local database backups.

Web Development Intern Feb 2024 – May 2024

- Designed initial backend architecture and relational database design for an internal billing web application; developed a high-fidelity mockup and functional prototype using React, which spearheaded the MVP to development.

PROJECTS

NEWS AGGREGATOR Ongoing

- Developing a self-hosted news aggregation pipeline in Go, using goroutines and gofeed to concurrently ingest and parse multi-format syndication feeds (RSS 2.0, Atom 1.0) into an embedded SQLite database.
- Integrated a Python NLP scoring pipeline leveraging WordNet semantic distance, filtering out duplicate or low-relevance content and ranking candidate stories to produce a daily digest of top 5–10 articles.

LOCAL AI ASSISTANT Ongoing

- Tuned inference to run a 3B model within an 8 GB RAM budget on bare-metal Linux (constraint-aware design).
- Persistent per-channel conversation memory + a SQLite fact-store (key-based retrieval) for cross-session recall; tool-calling middleware with sandboxed filesystem/shell access written in Go.

OPEN SOURCE CONTRIBUTIONS

SALN Tracker - BetterGov PH | React/TypeScript | Contributor

- Added a resources page to BetterGov PH's SALN Tracker - React codebase, integrating structured JSON metadata, sortable resource cards, navigation updates, and static preview assets within the existing design system.
- Delivered the feature through a reviewed and merged open-source pull request spanning 28 files.

Hibi - note-taking application | Electron/TypeScript | Windows Maintainer

- Windows maintainer for Hibi, a cross-platform note taking application built with Electron. Authored a number of merged PRs and currently maintaining through fixes and features.

EDUCATION

BATANGAS STATE UNIVERSITY - ALANGILAN Batangas City
BS Computer Engineering - General Weighted Average (GWA): 1.4 2024
Relevant Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems, Machine Learning
